Career Opportunities

Whether you're an experienced professional or a new graduate, our workplace provides opportunities to develop your skills, contribute to interesting and often highly visible projects, and advance your career through extensive professional development opportunities.

We offer a comprehensive benefits package, opportunities to work in cross functional teams, a successful leadership development curriculum, and a transfer program that enables employees to apply for internal opportunities within our many offices around the country.

Our People

Each day at Dewberry, more than 1,800 architects, engineers, and consultants work collaboratively with a broad array of clients throughout the United States. We support many federal agencies, state and local governments, businesses, and institutions with our high-caliber expertise; the latest in technological resources; and an approach based on integrity, value, and respect.

“What I love about my job are the regular challenges I undertake to facilitate a broad range of business needs,

and how Dewberry recognizes technology as a differentiator in our markets. My role supports the evaluation of new technologies—global positioning systems, laser scanning, 3-D design, intelligent object modeling, GIS platforms, and web-based information management and collaboration—to help Dewberry and its clients achieve strategic goals.”

Dave Palumbo, PE
*Technology Manager
Bloomfield, New Jersey*

“I recently moved to California from Boston to expand Dewberry’s hazard mitigation planning services on the West Coast. I’m based in the Sacramento area, but

my work has taken me across the country

for hazard mitigation planning projects. I’ve spent a lot of time working on the North Carolina County Emergency Management Snapshots project. We interviewed every county in North Carolina’s western region to create a book of ‘need to know’ information to be used by neighboring counties if emergency management personnel have to travel to help.”

Corinne Bartshire, AICP, CFM
*Hazard Mitigation Planner
Oakland California*

“Dewberry has given me the opportunity to push myself and grow through the challenges associated with complex projects.

This has given me more confidence in my ability as a project architect and project manager. I also just finished project management training, and I look forward to developing these skills in the years to come. Dewberry has also taught me the importance of client involvement in the design process. I’ve learned that the success of our projects hinge on our ability to provide a building that meets the clients expectations aesthetically and operationally.”

Roderick Williams, RA, CDT
*Project Architect
Fairfax, Virginia*

Culture

Our workplace is collegial yet forward-thinking—a community in which we can both support and challenge one another. Many projects enable us to work as virtual teams, collaborating from coast to coast with a diverse group of specialists to achieve breakthrough results for our clients. This common goal promotes respect for the ideas of all individuals

ranging from student interns to long term professionals regardless of their background or area of expertise. Our employees benefit from the leadership, extensive tools, and resources they need in order to succeed on a day-to-day basis and in their long-term career goals. Dewberry’s commitment to professional development through

extensive training opportunities and our tuition reimbursement program continuously improves our workforce while enhancing individual careers. Our firm also represents a longstanding tradition of excellence that continues to guide and inspire us—a rich legacy of performance, professionalism, and industry leadership.
