

Our services

- Comprehensive low voltage arc flash and coordination
- Conceptual detail and design
- Design-build
- Environmental impact and strategy
- Permitting (air, water, waste)
- Plant siting and site development
- Strategic planning
- Subsystem integration
- Surveying
- Water/wastewater treatment
- Civil and structural design
 - Structural inspection
 - Building and infrastructure design
- Electrical design
 - Substation and switchyard
 - Auxiliary power distribution
- Mechanical design
 - Plant air and cooling water systems
 - Heating, ventilation, and air conditioning (HVAC)

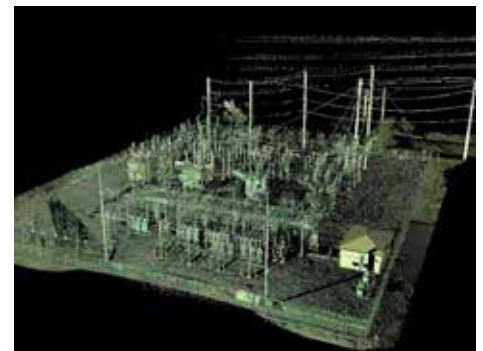

We are experts

We have extensive experience serving industrial clients with balance of plant systems. We recognize these subsystems are critical to the operation of the generating plant and set each plant apart from one another due to the interconnection with local infrastructure and industries.

We bring decades of hands-on power plant experience that allows us to deliver the right solutions tailored for each client's needs.

We are holistic

Our expertise of generating plants' balance of plant systems as well as local infrastructure allows for comprehensive and cost-effective solutions—employing sometimes underutilized resources. This diversity sets us apart by helping our clients find creative solutions to today's unique power and balance of plant challenges.
