

Surveying/Mapping

Since Dewberry's founding in 1956, we have been a leader in surveying and mapping services.

Our steady growth in this area and our ability to provide the technology, capabilities, capacity, and geographic presence to serve a diverse client base have made us an industry leader. We have a highly qualified team of survey professionals ready and able to deliver an extensive array of services, as well as the depth of support in personnel, equipment, and computer processing resources to

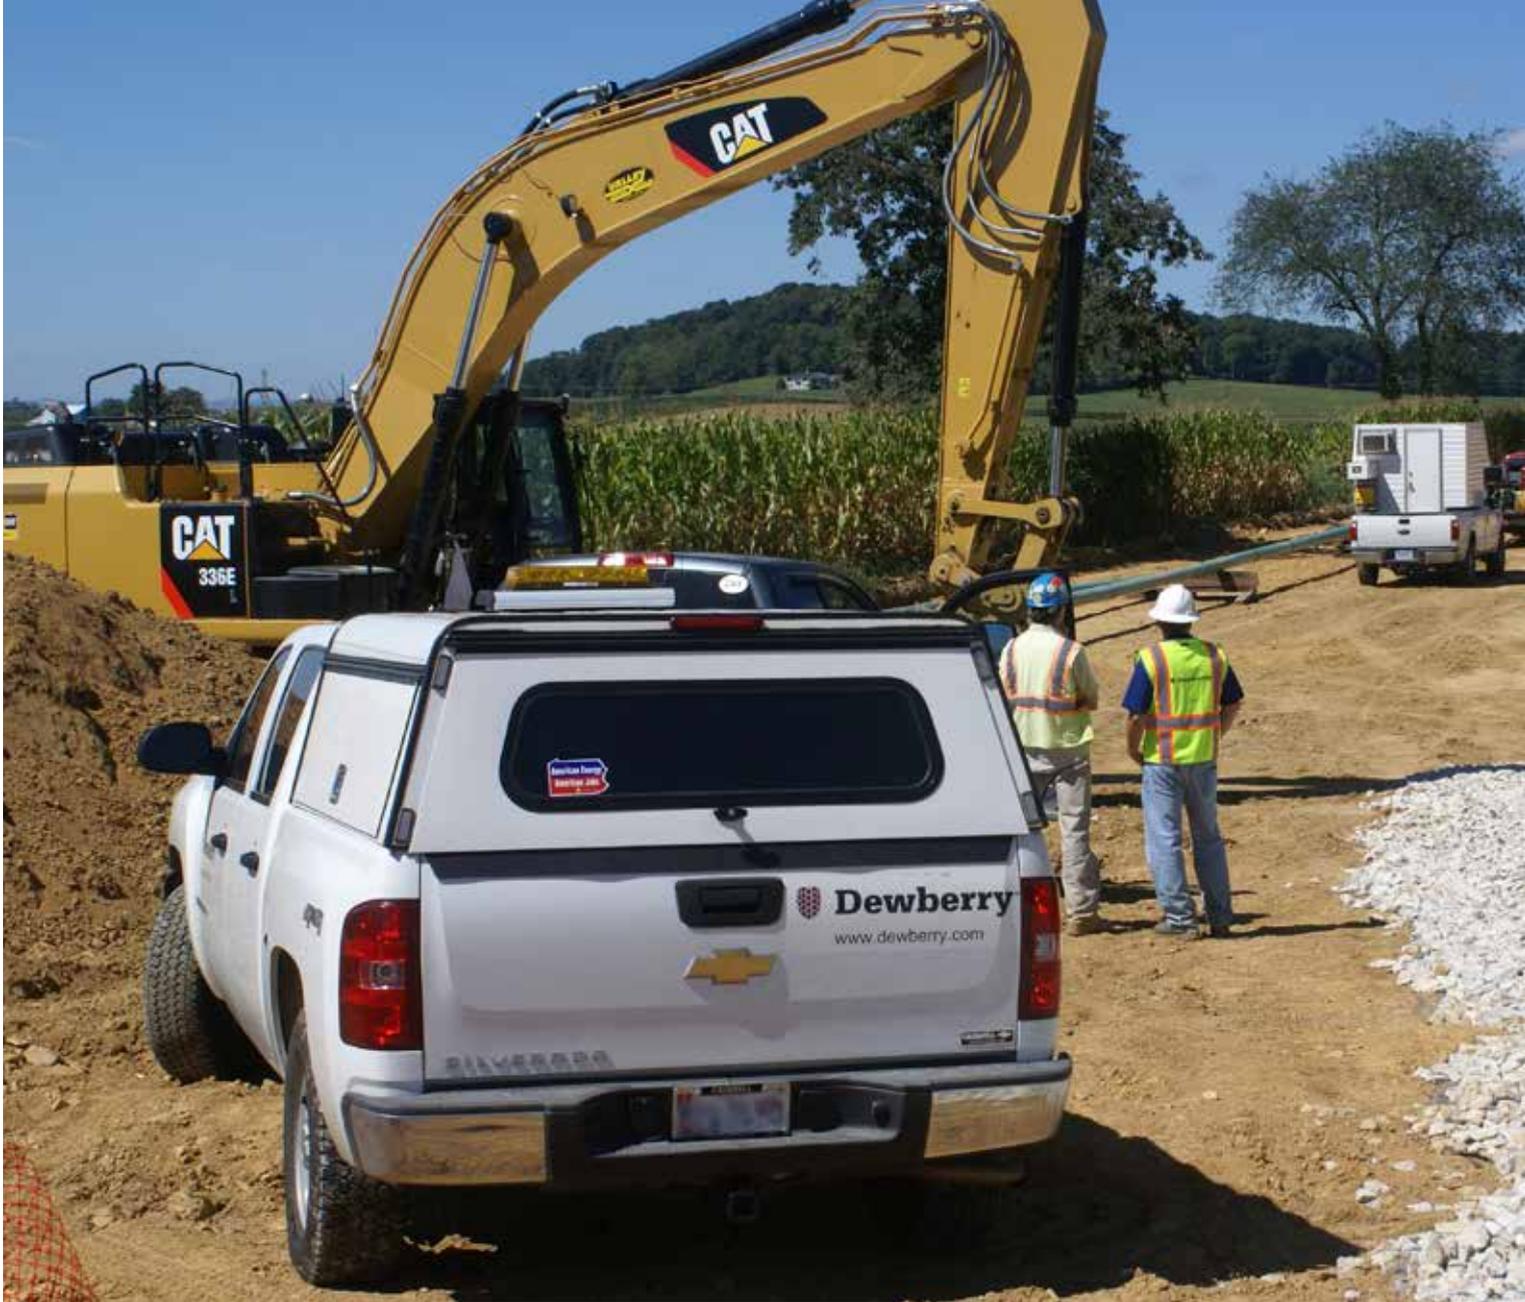

handle atypical tasks. We have the ability to pull from all available firm resources to meet project schedules; we respond to work requests quickly and fully, and assign highly qualified personnel to each task performed. We have the capacity to manage our clients' large and complex project assignments and serve as a fully integrated member of their project team.

A surveying station is set up on a black tripod with bright green legs. The station includes a yellow and black total station instrument mounted on top, a yellow and black data collector on a side arm, and a white and yellow prism. A small white sign with the handwritten text "OT-19" is placed on the ground near the tripod. In the background, a two-story house with a brown roof and a wooden balcony is built on tall wooden stilts. A boat is visible on a trailer under the house. The scene is outdoors with tall grass and a clear blue sky.

"I am personally very pleased to have worked with the staff at Dewberry and highly recommend both the firm and the individuals within."

Bob Humphreys  
*National Park Service*

Safety is integral to the success of our business. We train our staff and preplan our work to minimize risk. Our people, our clients, and the communities we serve, matter.

Our fully integrated field and office technologies have produced a company-wide standardization of work procedures, field data collection formats, and CAD standards. This technology provides our clients with the best value through seamlessly connecting key project participants with external information sources resulting in maximized return on field activities, improved safety through better situational awareness, and improved turnaround on final survey deliverables.

## Dewberry® Services
