Clients turn to us to navigate the complicated maze of permitting, approvals, and regulations that have been developed to conserve our planet’s beauty and resources. We know the regulations and the regulators and work with local, state, and federal agencies to shape regulations that protect the environment while supporting economic growth.

Industry Leaders
Our natural resources scientists and engineers develop strategies that accommodate capital improvements and development while adhering to low-impact development principles. We provide wetlands delineation, permitting, and mitigation planning, stream restoration, arboriculture, threatened and endangered species compliance, water quality-related studies, and water resources services.

50+ years providing environmental consulting and engineering services across the U.S.
Natural Resources Planning and Management
- Natural Resources Management Plans (NRMP)
- Wildlife/habitat management
- Watershed management
- Open space management
- Conservation planning and easements
- Invasive species control

Wetlands Services
- Delineation
- Mitigation searches and evaluations
- Mitigation design
- Wetland treatment systems
- Mitigation oversight and monitoring

Habitat Services
- Threatened and endangered species habitat evaluation
- Ecological studies/evaluations
- Ecological risk assessments
- Habitat enhancements

Stream Restoration and Stabilization
- Fluvial-geomorphic stream/floodplain restoration
- Natural stream channel restoration and stabilization
- Channel relocations and streambank stabilization
- Riparian buffer planting
- Bioengineering

Stormwater
- National Pollutant Discharge Elimination Systems (NPDES)
- Total Maximum Daily Loads (TMDL)
- Best management practices
- Erosion and sediment pollution control
- Post-construction stormwater management

Permitting
- Wetlands
- Stream restoration and stabilization
- Stormwater-NPDES
- Threatened and endangered species coordination
