Our portfolio includes tenant spaces, base buildings, mission critical data centers, multi-family residential complexes, government facilities, educational and institutional buildings, complex healthcare environments, and hotels. We have designed more than seven million square feet of K-12 schools worth over $1 billion in construction, in addition to all types of campus facilities for higher education clients. The healthcare facilities and hospital systems we serve total more than 10,000 beds throughout the United States.

Ranked in the top 40 MEP Giants by Consulting-Specifying Engineer, we’re proud to support our clients in their search for solutions to their most pressing challenges.
We stay in touch with the communities and industries we serve while understanding and applying energy saving initiatives, policy and legislation incentives, and ways to minimize life cycle costs.

Technology is evolving, and your needs as building users and operators are changing. When costs or needs dictate renovations and upgrades, our MEP design service experts are equipped to assess existing infrastructure and redesign systems to meet your needs. When projects require a new design, those same experts are here to consider space and financial needs in order to deliver designs that serve your customers, patients, or employees.
Dewberry® Specialties

- Hospitals and medical facilities
- Laboratories
- Infrastructure
- Federal government facilities
- Mission critical TIER-rated facilities
- Corporate headquarters
- High-rise office towers
- Central HVAC and power plants
- Energy efficiency up to 50% improved over baseline
- High-security projects
- Integrated audio/visual systems
Dewberry® Services

- MEP (mechanical, electrical, plumbing) engineering system design
- Asset management, including utilities, geospatial technologies, and condition assessments
- Base building and interiors, new and renovation
- Energy audits and modeling
- Fire protection and fire alarm system design
- Building Information Modeling
- Design-build turnkey services
- Construction administration
- Electronic drawing management systems
- Commissioning, retro-commissioning, and Persistent Commissioning™
- Arc flash, ground fault, and short circuit studies
- Renewable energy design
- USGBC LEED® MEP design
- Mission critical power and HVAC system design
- Controls design/integration
- Full complement of life cycle services
- Structural engineering
