

GEOSPATIAL AND TECHNOLOGY

Our consulting team includes many of **the most recognized and respected industry experts and thought leaders**. We create, analyze, and build tools to share geospatial data, as well as help clients integrate these tools into their daily lives. We fuse multiple data sets together and provide clients with easy-to-use tools that simplify the use of information to allow for more **effective and efficient decision-making**.

Topobathymetric Lidar Mapping of Kings Bay Citrus County, FL

Supporting Clients Through Geospatial Expertise

We see beyond standard technical requirements to anticipate our clients' long-term challenges. We understand best practices and know how to help clients find better ways to fulfill their missions through business analysis, strategic sessions, and technological solutions.

40+ years
of geospatial
and technical
services
experience

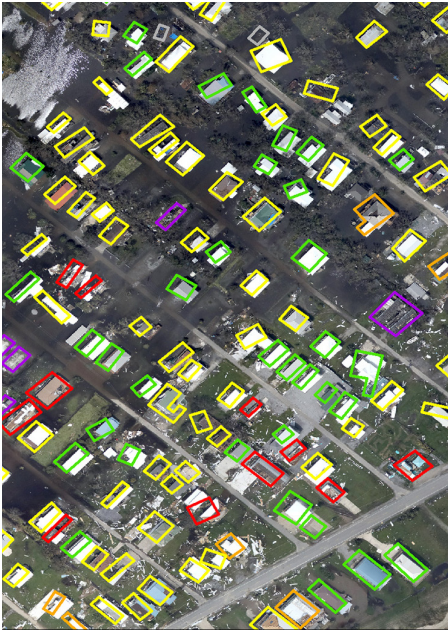

Geospatial Services

- Aerial data acquisition and processing for imagery, IFSAR, topobathymetric, and topographic lidar
- Aerotriangulation, photogrammetric mapping, and digital orthoimaging
- Asset management using DimensionalView®
- Business process analysis
- Database modeling and design
- Emergency response and damage assessments
- Environmental/seagrass mapping
- GIS services and applications development
- Independent QA/QC
- Planimetric mapping
- Post-disaster debris estimation
- Remote sensing and data analytics
- Solutions visioning
- Staff augmentation
- Technology assessment and gap analysis
- Web/cloud migration services
- Wildfire risk modeling

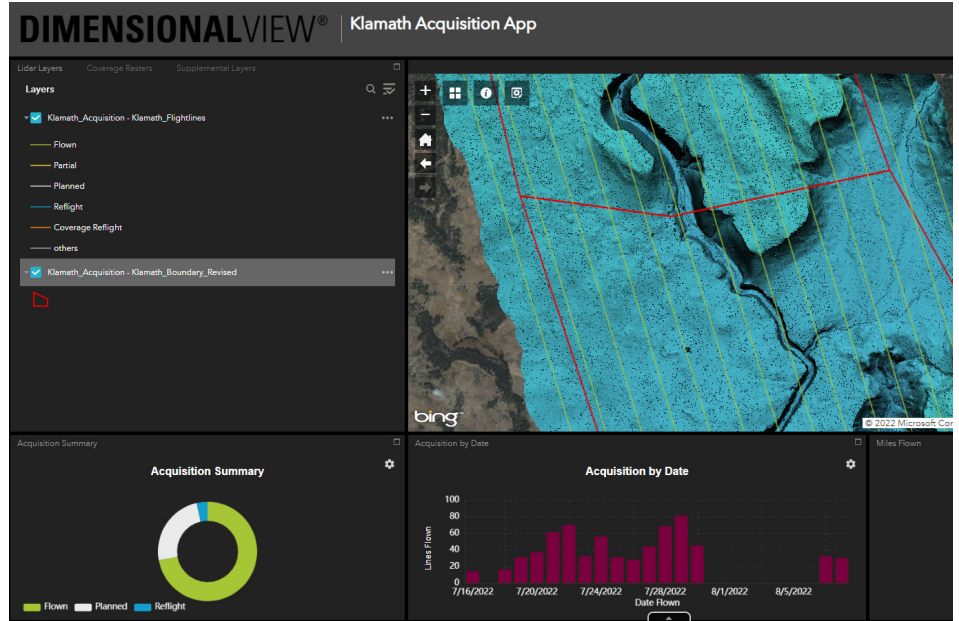

GEOSPATIAL AND TECHNOLOGY

Partnering with local, state, and federal agencies, as well as private-sector and global organizations, we are tenacious in our search for innovative GIS/IT, remote sensing, and facility management solutions to our clients' most pressing challenges.

We are dedicated to delivering excellence in support of our clients' programs and objectives, and we understand facility and asset management life cycles and can aid owners and managers with all facets of managing their facilities.

Machine Learning to Support Disaster Surge Efforts, Post-Hurricane Ida Louisiana

DimensionalView® Asset Management Nationwide

GIS/IT

We offer GIS solutions, analytics, and application development to support our clients' geospatial needs. We conduct geospatial damage assessments, offer unique solutions for state/local GIS needs, technology and risk assessments, and solutions visioning for our clients.

Remote Sensing

Our services include photogrammetry, lidar, geodesy, ground control and check point surveys, photo interpretation, field reconnaissance, orthophotography, hyperspectral and multispectral imagery analysis, and habitat and land use/cover mapping.

Facility and Asset Management

Our asset management experts help organizations find better and more cost-effective ways to track, manage, invest in, and optimize the purchase, maintenance, and disposition of their assets.

Our DimensionalView® platform offers a customizable GIS-based front-end interface with a robust back-end database to manage assets.
